**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/790,459	<b>Applicant(s)</b> COPE, WARREN B.
	<b>Examiner</b> AMAL ZENATI	<b>Art Unit</b> 2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

1) Responsive to communication(s) filed on 02 March 2009.  
 2a) This action is FINAL.      2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

4) Claim(s) 1-9, 11-26 and 28-35 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 1-9, 11-26 and 28-35 is/are rejected.  
 7) Claim(s) \_\_\_\_\_ is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

1) Notice of References Cited (PTO-892)  
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)  
 3) Information Disclosure Statement(s) (PTO/SB/08)  
 Paper No(s)/Mail Date \_\_\_\_\_

4) Interview Summary (PTO-413)  
 Paper No(s)/Mail Date. \_\_\_\_\_

5) Notice of Informal Patent Application  
 6) Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

2. Consider **Claims 1-9, 16-17, 19-26, and 33-34** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Calhoun et al (6,959,077 B1; hereinafter Calhoun)** in view of (“**Midwest Region: primer for Local Number Portability**,” Issue 2, p.1-31, 7/27/1997)

Consider **claims 1 and 19**, **Calhoun** clearly shows and discloses a method and a system of operating a communication system comprising: programming a first switch to terminate calls directed to at least one phone number (directory number) (col. 7, line 13-17; and claim 19); establishing a disaster (fault or disruption) recovery plan to terminate the at least one phone number at a second switch in response to the occurrence of a predetermined event (col. 7, line 17-46; and claim 19); in response to the occurrence of the predetermined event, programming a local copy of (Service Control Point /database) to direct communications for the at least one phone number to the second switch ( col. 5, lines 1-10; col. 7, line 33-46; and claim 19); wherein, all the phone numbers actively terminated by the first switch are ported to the second switch (col. 2, lines 1-15;col. 7, line 38-43); but **Calhoun** does not specifically state that the (Service Control Point (SCP) / database) was a *local number portability database (LNP)*and

*wherein the second switch is located in a different geographic area than the first switch*. Yet, Examiner still believes that (SCP) /database is the (LNP) database because both the (SCP)/database of Calhoun's invention and the *local number portability database* are programmed (read a database for instructions on routing the communication), these instructions are activated in *response* to the occurrence of the event; therefore, both have the same features; Moreover, figure 1 in Calhoun invention has the same basic architecture of LNP (see the figure on page 12 of "**Midwest Region: primer for local Number Portability," Issue 2, p.1-31, 7/27/1997**). However, if Calhoun does not use a LNP database as argued in the applicant remarks, Examiner still believes that it would have been obvious to use (LNP) database since the Federal Communications Commission (FCC's) requires all Local Service Providers to use database method for number portability by December 31, 1998; As a result, using (LNP) database was well known in the art and it was required by (FCC's).

In the same field of endeavor, ("**Midwest Region: primer for local Number Portability," Issue 2, p.1-31, 7/27/1997**) clearly discloses that the Federal Communications Commission (FCC's) requires all Local Service Providers using database method for number portability by December 31, 1998 (page 6, lines 1-8) and *wherein the second switch is located in a different geographic area than the first switch* (since there are three types of LNP, the second one is the Geographic Portability allows the end user to change from one geographic area to another Location Routing Number LRN) (page 4, lines 10-12; and lines 20-31).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to apply (LNP) database and the three types of LNP as taught by "**Midwest Region: primer for local Number Portability**" in Calhoun, in order to comply the regulation for using (LNP) as required by (FCC's).

Consider **claims 2, 3, and 20**, **Calhoun** clearly shows the method and the communication system, where the second switch is programmed to terminate calls to the at least one phone number (directory number) before the occurrence of the predetermined event and where the second switch is activated to terminate calls to the at least one phone number after the occurrence of the predetermined event (Calhoun: col. 5, line 13-25; and claim 19).

Consider **claim 4, 5, 21, and 22**, **Calhoun** clearly shows the method and the communication system, where the local copy of the local number portability database directs communications for the at least one phone number to the first switch before the occurrence of the predetermined event; and where the local copy of the local number portability database is queried whenever an on-net originating switch processes a call that will be terminated by on-net switch (Calhoun: col. 7, line 5- 16; and fig. 2).

Consider **claims 6, 7, 23, and 24**, **Calhoun** clearly shows the method and the communication system, where the local copy of the local number portability database is queried whenever an on-net originating switch processes a call that will be terminated by on-net switch; and where the local of the local number portability database is queried when the request for a connection to an on-net switch comes from an off-net device (Calhoun: col. 6, line 60 -67; and fig. 1).

Consider **claims 8, 9, 25, and 26**, **Calhoun** clearly shows the method and the communication system, where the predetermined event is when the first switch becomes disabled (col. 7, line 23-24); and where the programming of the local number portability database to direct communications for the at least one phone number to the second switch occurs automatically with determination that the first switch is disabled (col. 7, line 21-28).

Consider **claims 16 and 33**, **Calhoun** clearly shows the method and the communication system, where the communications for the at least one phone number is directed to the second switch by changing the location route number in the local number portability database (Calhoun: col. 8, claim 7, line 50-59).

Consider claims **17 and 34**, **Calhoun** clearly shows the method and the communication system, where the local number portability database is a local copy of the regional local number portability database and the local copy of the local number portability database is under the control of only 1 service provider (**Calhoun**: col. 8, line 19-21).

3. Consider Claims **11, 12, 28, and 29** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Calhoun et al (6,959,077 B1; hereinafter Calhoun)** in view of (“**Midwest Region: primer for Local Number Portability**,” Issue 2, p.1-31, 7/27/1997) and further in view of **Ward** (patent No.: US **6654,451 B1**)

Consider claims **11 and 28**, **Calhoun and Midwest Region** disclose the claimed invention above but fail to specifically disclose the system, where the at least one phone number is a phone number resulting from the translation of a toll free phone number

In the same field of endeavor, **Ward** clearly discloses the system, where the at least one phone number is a phone number resulting from the translation of a toll free phone number (col. 3, lines 35-47).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use translation of a toll free phone number as taught by **Ward** in **Calhoun** and **Midwest Region**, in order to determine subscriber's terminating number (abstract).

Consider claims **12 and 29**, **Calhoun, Midwest Region, and Ward** clearly show the method and the communication system, where the at least one phone number can also be dialed directly (**Calhoun**: col. 3, line 54-61).

4. Consider Claims **13, 14, 15, 30, 31 and 32** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Calhoun et al (6,959,077 B1; hereinafter Calhoun)** in view of (“**Midwest Region**:

**primer for Local Number Portability," Issue 2, p.1-31, 7/27/1997)** and further in view of Gibson (patent No.: US 7,076,045 B1)

Consider claims 13 and 30, **Calhoun and Midwest Region** disclose the claimed invention above and Calhoun discloses the SMS downloads information to the databases of SCPs (LNP) and when subscribers set up or modify their ensemble of AIN services (Calhoun: col. 5, lines 1-10) but fail to specifically disclose the method and the communication system, where the programming the local number portability database is done from *a web page*.

In the same field of endeavor, **Ward** clearly discloses the system, the method and the communication system, where the programming the local number portability database is done from a web page (by using service Management System SMS) (col. 10, lines 26-43; and col. 11, lines 25-39).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use a web page to program the local number portability database as taught by Ward in Calhoun and Midwest Region, in order to customize and execute call services (col. 10, lines 40-43).

Consider claims 14 and 31, **Calhoun, Midwest Region, and Ward** clearly show the method and the communication system, where the second switch is changed (ported, active, program) to terminate calls to the at least one phone number using the web page (Calhoun: col. 5, lines 12-22; col. 8, claim 4; and Ward: col. 11, lines 25-39).

Consider claims 15 and 32, **Calhoun** clearly shows the method and the communication system, where the change made to the second switch is to activate the termination of pre-programmed numbers from the first switch (Calhoun: col. 6, lines 6-22; col. 7, line 33-49).

***Response to Arguments***

4. The present Office Action is in response to Applicant's amendment filed on March 02, 2009.

Applicant has amended **claims 1 and 19**, and cancelled **claim 18 and 35**; **claims 1-9, and 11-17, 19-26, and 28-34** are now pending in the present application.

6. Applicant argues regarding the amended independent claims 1 and 19 on pages 7-9 of the Applicant's Response that Calhoun and Midwest Region fail to teach porting all the phone numbers actively terminated by the first switch to the second switch. Applicant argues that Calhoun discloses routing the call to an alternate destination if there is an alternate phone number in the database, but Calhoun fails to rout the call to the second switch if there is no alternate number in the database.

The Examiner respectfully disagrees with Applicant's argument, Claim 1 recites "in response to the occurrence of a predetermined event, programming a local copy of a local number portability database to direct communications for at least one phone number to a second switch, wherein the second switch is located in a different geographic area than the first switch, and wherein all the phone numbers actively terminated by the first switch are ported to the second switch" [emphasis added]. Claim 1 does not recite "routing the call to an alternate destination/the second switch if there is no an alternate phone number in the local number portability database." Therefore, Applicant is arguing a feature that is not recited in the claim. Furthermore, Calhoun clearly discloses all phone numbers actively terminated by the first switch that programmed/ported in local number portability database to be directed to the second switch (col. 2, lines 6-14; and col.5, lines 11-22). In addition, Midwest Region clearly discloses direct communications and rout calls to the second switch according to the programmed local copy of a local number portability database that shows the LNP Routing Tables for porting the phone numbers actively terminated by a first switch to a second switch (page 4, lines 21- 32; and page 5). As a result, both Calhoun and Midwest Region clearly disclose claims 1 and 19 as recited.

Therefore, in view of the above reasons, Examiner maintains rejections.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amal Zenati whose telephone number is 571- 270- 1947. The examiner can normally be reached on Monday-Friday from 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on 571- 272- 7499. The fax phone number for the organization where this application or proceeding is assigned is 571- 273-8300.
